## PROJECTS

### Bank Management system

- A desktop application that simulates core banking features like user authentication, creating accounts, checking balances, depositing and withdrawing money, and viewing passbook.
- It helps users understand how banking systems work in a safe, virtual environment with a user-friendly interface.
- Tech Stack: Java Swing, MySQL, Java

### NexusGrid

- A real-time dashboard that monitors system performance in computer labs. It collects data like CPU and memory usage from each machine and shows it live on the admin's screen.
- Built to help IT teams keep track of multiple computers efficiently.
- Tech Stack: Django, Django REST Framework, Celery, Redis, WebSockets, Socket.IO
